Sri Eshwar College of Engineering

(Autonomous)

Syllabus

| Department | Programme Code Mech & Engineering Design & Name M.E. (ED) | |
|------------|---|---|
| | <u>Semester – I</u> | |
| P19MA102 | APPLIED MATHEMATICS FOR ENGINEERING L T P C DESIGN 3 2 0 4 | |
| | After completion of this course, the students will be able to | |
| | CO1 (Understand) Explain the fundamentals of applied mathematics in K2 engineering | |
| | CO2 (Understand) Explain the fundamentals of calculus of variations for K2 first and higher order calculus | |
| Outcomes | CO3 (Understand) Explain the fundamentals of probability and random K2 variables | |
| | CO4 (Apply) Apply the technique of Laplace transform for partial K3 differential equations | ì |
| | CO5 (Apply) Apply the technique of Fourier transform for partial K3 differential equations | ì |
| MODULE I | MATRIX THEORY 9 | |

The Cholesky decomposition - Generalized Eigenvectors - Canonical basis - QR factorization - Least squares method - Singular value decomposition.

MODULE II CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler's equation – Functional dependant on first and higher order derivatives – Functionals dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric problems - Direct methods : Ritz and Kantorovich methods.

MODULE III PROBABILITY AND RANDOM VARIABLES

Probability – Axioms of probability – Conditional probability – Baye's theorem - Random variables Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a random variable.

MODULE IV LAPLACE TRANSFORM TECHNIQUES FOR PARTIAL 9 DIFFERENTIAL EQUATIONS

Laplace transform - Definitions - Properties – Transform error function - Bessel's function – Dirac delta function - Unit step functions – Convolution theorem – Inverse Laplace transform : Complex inversion formula – Solutions to partial differential equations : Heat equation - Wave equation.

MODULE V FOURIER TRANSFORM TECHNIQUES FOR PARTIAL DIFFERENTIAL EQUATIONS

Fourier transform: Definitions - Properties – Transform of elementary functions - Dirac delta function – Convolution theorem – Parseval's identity – Solutions to partial differential equations : Heat equation -

9

Wave equation - Laplace and Poison's equations.

Total: 60 Hours

|----------|-------------------------------------|--|-------|----|---|----|--|--|
| | | | 3 | 0 | 0 | 3 | | |
| Outcomes | After o | completion of this course, the students will be able to | | | | | | |
| | CO1 | (Apply) Apply the basic principles of computer aided design and graphics in product design and development. | | | | | | |
| | CO2 | (Apply) Apply the surface and solid modeling techniques in product design | | | | | | |
| | CO3 | (Apply) Apply the curve generation and assembly motechniques in product design | delin | ıg | К | 3 | | |
| | CO4 | (Apply) Apply top-down design principles to model a design | | | К | 3 | | |
| | CO5 | (Evaluate) Compare the use of curves and surfaces in CAD | | | К | (5 | | |
| MODULE I | INTR | ODUCTION TO COMPUTER GRAPHICS FUNDAMENTALS | | | 9 | | | |

Output primitives (points, lines, curves etc.,), 2-D & 3-D transformation (Translation, scaling, rotation) windowing - view ports - clipping transformation.

MODULE II CURVES AND SURFACES MODELLING

Introduction to curves - Analytical curves: line, circle and conics – synthetic curves: Hermite cubic spline-Bezier curve and B-Spline curve – curve manipulations.

Introduction to surfaces - Analytical surfaces: Plane surface, ruled surface, surface of revolution and tabulated cylinder – synthetic surfaces: Hermite bicubic surface- Bezier surface and B-Spline surface-surface manipulations.

MODULE III NURBS AND SOLID MODELING

NURBS- Basics- curves, lines, arcs, circle and bi linear surface. Regularized Boolean set operations - primitive instancing - sweep representations - boundary representations - constructive solid

9

Geometry - comparison of representations - user interface for solid modeling.

MODULE IV VISUAL REALISM

Hidden – Line – Surface – solid removal algorithms shading – coloring. Introduction to parametric and variational geometry based software's and their principles creation of prismatic and lofted parts using these packages.

MODULE V ASSEMBLY OF PARTS AND PRODUCT DATA EXCHANGE

Assembly modeling - interferences of positions and orientation - tolerances analysis – mass property calculations - mechanism simulation. Graphics and computing standards– Open GL Data Exchange standards – IGES, STEP etc–Communication standards.

Total: 45 Hours

MODULE I RESEARCH PROBLEM

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

MODULE II LITERATURE STUDY AND PLAGIARISM

Effective literature studies approaches, analysis. Plagiarism, Research ethics

MODULE III REPORT WRITING

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

MODULE IV NATURE OF INTELLECTUAL PROPERTY

Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

MODULE V PATENT RIGHTS AND NEW DEVELOPMENTS IN IPR

Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

CAD Introduction.

Sketcher module

Solid modeling - Extrude, Revolve, Sweep, etc and Variational sweep, Loft ,etc

Surface modeling – Extrude, Sweep, Trim., etc and Mesh of curves, Free form etc

Feature manipulation – Copy, Edit, Pattern, Suppress, History operations etc.

Assembly-Constraints, Exploded Views, Interference check

Drafting - Layouts, Standard & Sectional Views, Detailing & Plotting.

CAD data Exchange formats - IGES, PDES, PARASOLID, DXF and STL

Exercises in Modeling and drafting of Mechanical Components - Assembly using Parametric and feature based Packages like PRO-E / SOLID WORKS /CATIA / NX etc

TOTAL : 60 HOURS

| P19ED112 | A | DVANCED ANALYSIS AND SIMULATION L T LABORATORY 0 0 | Р 4 | C 2 | | | | | |
|---|--|--|---------|--------|--|--|--|--|--|
| | After | completion of this course, the students will be able to | | | | | | | |
| | C01 | CO1 (Apply): Apply the fundamental knowledge on using various analytical tools like ANSYS, MATLAB, etc., for engineering applications | | | | | | | |
| Outcomes | CO2 | (Analyze): Perform analysis of stress, truss/beam and dyna analysis of mechanical members. | amic k | K4 | | | | | |
| | CO3 (Analyze): Simulate simple problems in vibrations and simple mechanisms using simulation software. | | | | | | | | |
| | CO4 | (Analyze): Perform two dimensional stress analysis in plate and asymmetric shells. | | | | | | | |
| | CO5 | (Analyze): Analyze the temperature distribution in one dimension heat transfer problems (walls and fins). | ional I | К4 | | | | | |
| MODULE I | SIMU | ULATION | | 15 | | | | | |
| 1. MATLAB basics, | Dealing | g with matrices, Graphing-Functions of one variable and two variable | es | | | | | | |
| 2. Use of Matlab to | solve s | simple problems in vibration | | | | | | | |
| 3. Mechanism Sim | 3. Mechanism Simulation using Multibody Dynamic software. | | | | | | | | |
| MODULE II | ANA | LYSIS | | 45 | | | | | |
| 1. Force and Stress analysis using link elements in Trusses, cables etc. | | | | | | | | | |
| 2. Stress and deflection analysis in beams with different support conditions. | | | | | | | | | |

- 3. Stress analysis of flat plates and simple shells.
- 4. Stress analysis of axi symmetric components.
- 5. Thermal stress and heat transfer analysis of plates.
- 6. Thermal stress analysis of cylindrical shells.
- 7. Vibration analysis of spring-mass systems.
- 8. Model analysis of Beams.
- 9. Harmonic, transient and spectrum analysis of simple systems.

| | CO1 | Demonstrate key machine elements in a mecha | Demonstrate key machine elements in a mechanical machine elements K2 | | | | | |
| | CO2 | Investigate standards used in designing of machine elements | | | | | | |
| Outcomes | CO3 | Infer various stresses acting on machine elements according to various K3 loading conditions | | | | | | |
| | CO4 | Design shaft, bearings, casings used in power t | ransmiss | ion syster | m | K6 | | |
| | CO5 | Design gears, gearbox, clutches, brakes for and mechanical applications. | automobi | ile, mach | ine tool | s K6 | | |
| MODULE I | FUNDAMENTALS AND DESIGN OF SHAFTS | | | | | 9 | | |

Phases of design – Standardization and interchangeability of machine elements - Process and Function Tolerances – Individual and group tolerances – Selection of fits for different design situations – Design for assembly and modular constructions – Concepts of integration –BIS, ISO, DIN, BS, ASTM Standards. Oblique stresses – Transformation Matrix – Principal stresses – Maximum shear stress - Theories of Failure – Ductile vs. brittle component design - Analysis and Design of shafts for different applications – integrated design of shaft, bearing and casing – Design for rigidity

MODULE II DESIGN OF GEARS AND GEAR BOXES

Principles of gear tooth action – Gear correction – Gear tooth failure modes – Stresses and loads – Component design of spur, helical, bevel and worm gears – Design for sub assembly – Integrated design of speed reducers and multi-speed gear boxes – application of software packages.

MODULE III BRAKES & CLUTCHES

Dynamics and thermal aspects of brakes and clutches – Integrated design of brakes and clutches for machine tools, automobiles and mechanical handling equipments.

MODULE IV INTEGRATED DESIGN

Integrated Design of systems consisting of shaft, bearings, springs, motor, gears, belt, rope, chain, pulleys, Cam & Follower, flywheel etc. Example - Design of Elevators, Escalators, Gear Box, Valve gear Mechanisms, Machine Tools.

18

9

TOTAL : 45 HOURS

The Pattern of Question Paper will consist of one Question from Unit – 4 for 50% of total marks.

** Term Project must be given for Assessment – 3 (Compulsory)

After completion of this course, students will be able to

- CO1 **(Analyze)** Learn about the elastic and plastic behavior of material and K4 analyze stress invariants, principal stresses and their directions.
- CO2 **(Analyze)** Determine strain invariants, principal strains and their K4 directions.

CO3 **(Analyze)** Develop constitutive relationships between stress and strain K4 for linearly elastic solid.

- CO4 **(Analyze)** Analyze theories of failure and design components for safe K4 operation.
- CO5 **(Analyze)** Examine the properties of ideally plastic solid and apply the K4 concepts of energy methods in solving structural problems.

MODULE I ELASTICITY

Outcomes

Stress-Strain relations and general equations of elasticity in Cartesian, Polar and curvilinear coordinates, differential equations of equilibrium-compatibility-boundary conditions-representation of three-dimensional stress of a tension generalized hook's law - St. Venant's principle – plane stress - Airy's stress function. Energy methods.

MODULE II SHEAR CENTER AND UNSYMMETRICAL BENDING

Location of shear center for various thin sections - shear flows. Stresses and Deflections in beams subjected

9

to unsymmetrical loading-kern of a section.

MODULE III STRESSES IN FLAT PLATES AND CURVED MEMBERS

Circumference and radial stresses – deflections - curved beam with restrained ends - closed ring subjected to concentrated load and uniform load - chain links and crane hooks. Solution of rectangular plates – pure bending of plates – deflection – uniformly distributed load – various end conditions

MODULE IV TORSION OF NON-CIRCULAR SECTIONS

Torsion of rectangular cross section - St.Venants theory - elastic membrane analogy - Prandtl's stress function - torsional stress in hollow thin walled tubes.

MODULE V STRESSES IN ROTATING MEMBERS AND CONTACT STRESSES

Radial and tangential stresses in solid disc and ring of uniform thickness and varying thickness allowable speeds. Methods of computing contact stress- deflection of bodies in point and line contact applications.

TOTAL : 45 Hours

|----------|--|------|---|---|---|
| | | 3 | 0 | 0 | 3 |
| | After completion of this course, the students will be able | e to | | | |

- CO1 **(Analyze)** Understand the fundamentals of vibration and its practical K4 applications
- CO2 **(Evaluate)** Model, approximate, analyse and simulate vibratory systems K5 that include general forcing, general boundary conditions, and nonlinearities using approximate computational tools as necessary
- CO3 **(Analyze)** Discern the relevant principles that must be applied to describe or measure the equilibrium or motion of vibratory systems
 - CO4 **(Apply)** Explain and describe principles and components of vibration K3 analysis and their inter relationships
 - CO5 **(Analyze)** Establish relation between real system and physical model and K4 examine their vibration response

MODULE I FUNDAMENTALS OF VIBRATION

Introduction -Sources of Vibration-Mathematical Models- Displacement, velocity and Acceleration- Review Of Single Degree Freedom Systems -Vibration isolation Vibrometers and accelerometers - Response To Arbitrary and non- harmonic Excitations – Transient Vibration – Impulse loads- Critical Speed Of Shaft-Rotor systems.

MODULE II TWO DEGREE FREEDOM SYSTEM

Introduction-Free Vibration Of Undamped And Damped - Forced Vibration With Harmonic Excitation System –Coordinate Couplings And Principal Coordinates.

MODULE III MULTI-DEGREE FREEDOM SYSTEM AND CONTINUOUS SYSTEM

6

8

9

K4

9

9

Sri Eshwar College of Engineering (Autonomous)

Multi Degree Freedom System –Influence Coefficients and stiffness coefficients- Flexibility Matrix and Stiffness Matrix – Eigen Values and Eigen Vectors-Matrix Iteration Method –Approximate Methods: Dunkerley, Rayleigh's, and Holzer Method -Geared Systems-Eigen Values & Eigen vectors for large system of equations using sub space, Lanczos method - Continuous System: Vibration of String, Shafts and Beams.

MODULE IV EXPERIMENTAL METHODS IN VIBRATION ANALYSIS

Vibration Analysis Overview - Experimental Methods in Vibration Analysis.-Vibration Measuring Instruments -Selection of Sensors- Accelerometer Mountings. -Vibration Exciters-Mechanical, Hydraulic, Electromagnetic And Electrodynamics – Frequency Measuring Instruments-. System Identification from Frequency Response -Testing for resonance and mode shapes

MODULE V VIBRATION CONTROL

Specification of Vibration Limits –Vibration severity standards- Vibration as condition Monitoring tool-Vibration Isolation methods- -Dynamic Vibration Absorber, Torsional and Pendulum Type Absorber- Damped Vibration absorbers-Static and Dynamic Balancing-Balancing machines-Field balancing – Vibration Control by Design Modification- - Active Vibration Control

| | C01 | (Understand) Understand the basic of vibration in machines | concepts an | d behavi | our of | K2 | |
| | CO2 | (Apply) Evaluate the natural frequencies single degree and two degree vibration systems | | r parame | ters in | К3 | |
| Outcomes | CO3 | (Apply) Demonstrate an understanding devices are handled for dynamic testing | on how ce | rtain mea | asuring | К3 | |

- CO4 **(Evaluate)** Evaluate the natural frequency of rotating and K5 reciprocating systems
- CO5 (Evaluate) Evaluate the natural frequency for different structural K5 members

List of Experiments

1. To study the forced vibration of the beam for different damping.

Sri Eshwar College of Engineering (Autonomous)

- 2. To determine the radius of gyration `k' of a given compound pendulum.
- 3. To determine the radius of gyration of given bar using bi-filler suspension.
- 4. To determine the radius of gyration of trifilar suspension.
- 5. To verify the dunker lay's rule viz.
- 6. To study the pressure profile of lubricating conditions of load and speed.
- 7. To determine the natural frequency of undamped torsional vibration of a single rotor shaft system.
- 8. To determine the natural frequency of undamped torsional vibration of two rotor shaft system.
- 9. To determine the frequency of undamped free vibration of an equivalent spring mass system.
- 10. To determine the frequency of damped force vibration of a spring mass system.
